

Video Sharing Database Management System

YouTube is the most popular video sharing site in the world. It consists of millions of videos to watch, share and enjoy. But have you ever thought about the database that holds so much of data that handles about 4 billion views a day, and its architectural design. It requires intricate links between the tables to get any database working without any hassle or glitches. My database would be a redesign of the YouTube's database.

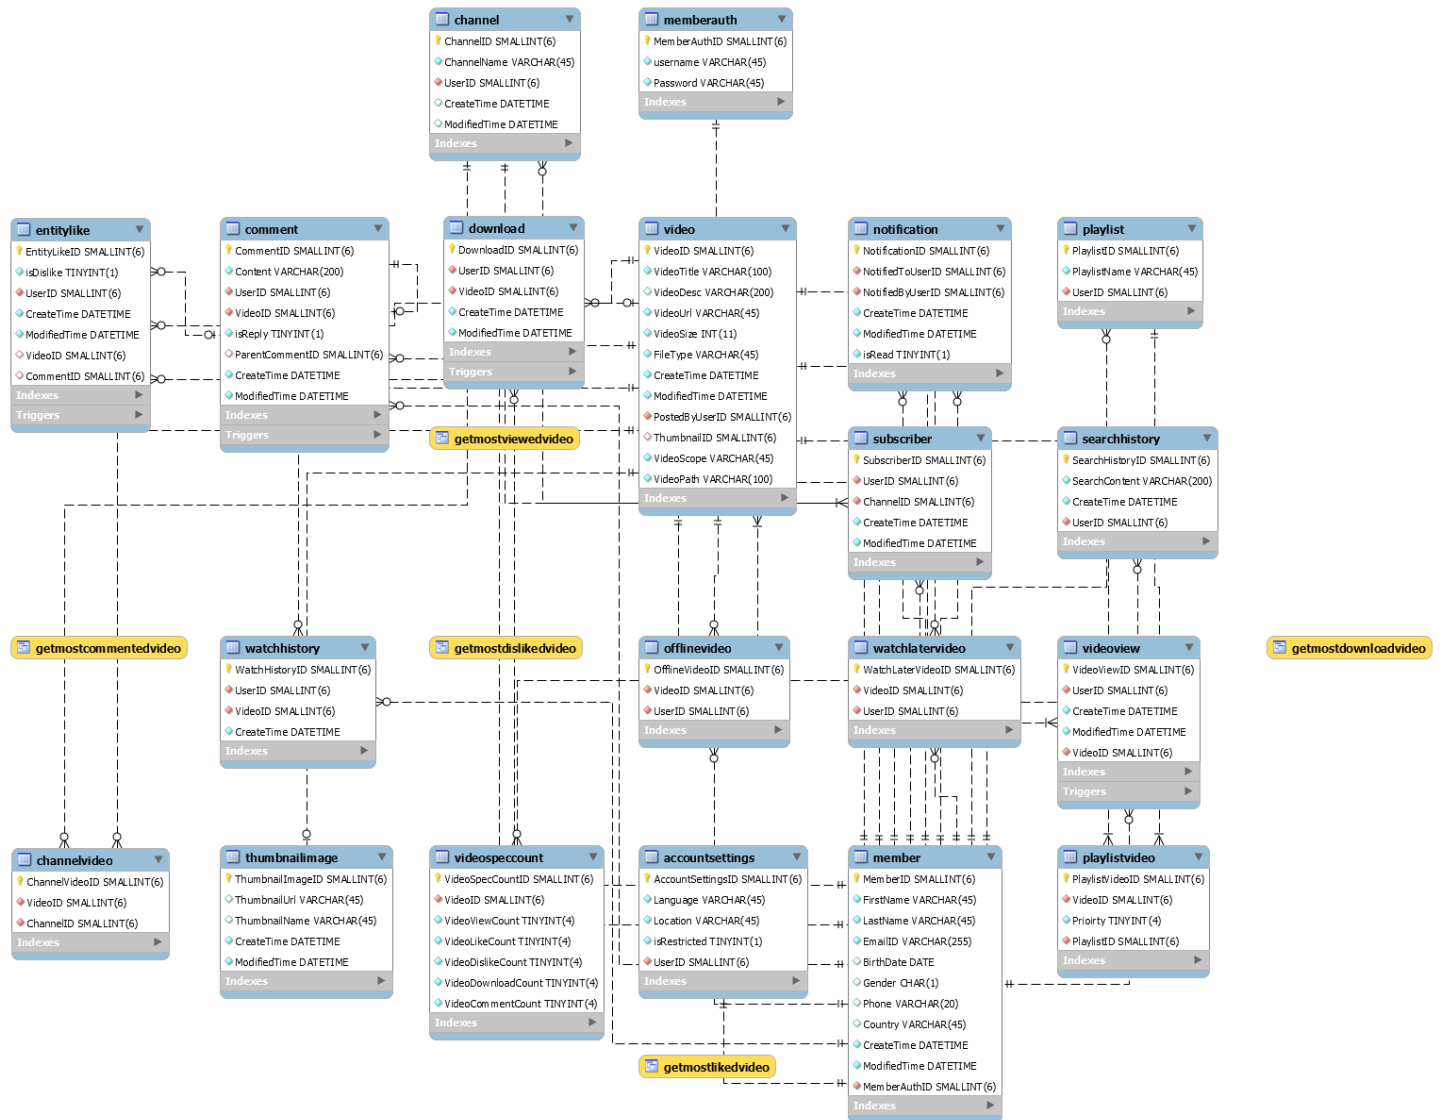

Relations in this database:

1. **Member:** It consists of the details of every user such as Firstname, Lastname, email, etc.
2. **MemberAuth:** Authentication details of the member like username and password
3. **Video:** It consists of the details of every video uploaded such as its, name, description, the user who uploaded it, uploaded time, etc.
4. **Entitylike:** Details of every reaction of every user on every video
5. **Download:** Consists of details of downloads of every video
6. **Videoview:** Information of every view on every video
7. **Comment:** It consists of details related to comments on a video and the replies associated with it. It consists of a self referencing relationship where every reply is connected to its parent comment
8. **Channel:** Details related to a channel such as its name, owner of the channel and the videos in the channel etc.
9. **ChannelVideo:** Details of videos in particular channels
10. **Subscriber:** Details of the subscriber such as name, the channel to which they have subscribed
11. **Thumbnailimage:** Every video would have a thumbnail image whose details are stored in this table
12. **Playlist:** The information related to a playlist created by a user and the video list is stored in this table
13. **PlaylistVideo:** Details related to the videos and their sequence in a specific playlist
14. **Offline Video:** Offline videos of every user is stored in this table
15. **WatchHistory:** The history of videos watched by every user is stored in this table
16. **WatchLaterVideo:** Consists of the list of videos a user has marked to be watched later
17. **SearchHistory:** Keeps a record of the content the user has searched in the past
18. **Notification:** The details of the notifications that need to be sent to the user is stored in this table
19. **AccountSettings:** Every member has a record of account settings where options to show restricted videos, language, country, etc are maintained

20. **VideoSpecCount:** This table is populated by multiple triggers on various other tables to keep track of the count of every activity on a video, such as the number of downloads, views, likes, dislikes on every video

ER Diagram:

The following is the ER Diagram:

TRIGGERS:

1. To populate the count of downloads for every download of a video:

Before inserting a new download:

```
243 -- before inserting a new download entry
244 select videospeccountid, videoid, videodownloadcount
245 from videospeccount
246 where videoid = 30321;
```

Result Grid	Filter Rows:	Export:	Wrap Cell Content:
videospeccountid	videoid	videodownloadcount	
91	30321	1	

After inserting a new row into the download table:

```
769 CREATE TRIGGER `videosharingdb`.`Download_AFTER_INSERT`
770 AFTER INSERT ON `videosharingdb`.`download`
771 FOR EACH ROW
772 BEGIN
773     IF (SELECT COUNT(*) FROM VideoSpecCount WHERE VideoID = NEW.VideoID) = 1
774     THEN
775         UPDATE VideoSpecCount
776         SET VideoDownloadCount = (VideoDownloadCount + 1)
777         WHERE VideoSpecCount.VideoID = NEW.VideoID;
778     ELSE
779         INSERT INTO VideoSpecCount(VideoDownloadCount, VideoID) VALUES(1, NEW.VideoID);
780     END IF;
781 END$$
782
783 delimiter //
784 INSERT INTO download(DownloadID, UserID, VideoID, CreateTime, ModifiedTime) VALUES
785 (11111, 12610, 30321, '1970-01-01 01:32:26', '1971-10-18 14:02:42.221561'),
786 (12222, 14712, 30321, '1982-03-02 09:48:53', '1983-09-16 20:27:23.010686');
787
788 -- after inserting a new download entry
789 select videospeccountid, videoid, videodownloadcount
790 from videospeccount
791 where videoid = 30321;
```

Result Grid	Filter Rows:	Export:	Wrap Cell Content:
videospeccountid	videoid	videodownloadcount	
91	30321	3	

2. To populate the count of likes and dislikes for every reaction on a video:

Before inserting a new entitylike entry

```

795 -- before inserting a new entitylike entry
796 select *
797 from videospeccount
798 where videoid = 30321;
799

```

VideoSpecCountID	VideoID	VideoViewCount	VideoLikeCount	VideoDislikeCount	VideoDownloadCount	VideoCommentCount
91	30321	1	0	0	3	3
NULL	NULL	NULL	NULL	NULL	NULL	NULL

Trigger Definition:

```

804 CREATE TRIGGER `videosharingdb`.`EntityLike_AFTER_INSERT`
805 AFTER INSERT ON `videosharingdb`.`entitylike`
806 FOR EACH ROW
807 BEGIN
808     IF (SELECT COUNT(*) FROM VideoSpecCount WHERE VideoID = NEW.VideoID) = 1
809     THEN
810         IF (NEW.isDislike = 0)
811         THEN
812             UPDATE VideoSpecCount
813             SET videolikecount = (videolikecount + 1)
814             WHERE VideoSpecCount.videoid = new.VideoID;
815         ELSE
816             UPDATE VideoSpecCount
817             SET VideoDislikeCount = (VideoDislikeCount + 1)
818             WHERE VideoSpecCount.videoid = new.VideoID;
819         END IF;
820     ELSE
821         IF(NEW.isDislike = 0)
822         THEN
823             INSERT INTO VideoSpecCount(VideoLikeCount, VideoID)
824             VALUES (1, NEW.VideoID);
825         ELSE
826             INSERT INTO VideoSpecCount(VideoDislikeCount , VideoID)
827             VALUES (1, NEW.VideoID);
828         END IF;
829     END IF;
830 END$$

```

After inserting new values into entitylike table

```

832 -- Inserting data into table entitylike
833 INSERT INTO entitylike(EntityLikeID, isDislike, UserID, CreateTime, ModifiedTime, VideoID, CommentID) VALUES
834 (30000, 1, 27922, '1989-05-10 11:21:23', '1989-05-13 07:45:10.002898', 30321, 30386),
